FORMATIVE

If the input is a color image, **then** convert it to grayscale.

- GRAY = (RED + GREEN + BLUE) / 3
- GRAY = 0.30 * RED + 0.59 * GREEN + 0.11 * BLUE
- OpenCV library call

n1	n2	n3
n4		n5
n6	n7	n8

BLUR = (n1 + n2 + n3 + n4 + me + n5 + n6 + n7 + n8) / 9

GAUSS = (n1 + 2 * n2 + n3 + 2 * n4 + 4 * me + 2 * n5 + n6 + 2 * n7 + n8) / 16

OpenCV library call

	Original	Blurred
<elvis>		
<OTHER>		

SUMMATIVE

Output the grayscale image **in color** to indicate edge pixels as red (0 0 255) instead of gray.

Gx = (n3 + 2 * n5 + n8) - (n1 + 2 * n4 + n6)

Gy = (n6 + 2 * n7 + n8) - (n1 + 2 * n2 + n3) ...be careful, y-coordinate upside down

G = abs(Gx) + abs(Gy)

if(G > threshold) then **edge**

	High Threshold	Low Threshold
